Gustafson practice • 230103341 • real process measurements
Measured vs. model (fit RMSE=0.246)
Ideal S=P
Gustafson fit: alpha=0.7850
Amdahl: same numeric fraction*
Measured mean ± 1 SE (5 trials)
Matched-work scaled speedup Ts(Pk) / Tp(Pk)
Worker processes P
Weak scaling: k=1,000,000 evaluations / worker
Fixed-time ideal: T1
End-to-end runtime ± 1 SE
Wall-clock seconds
Worker processes P
*Amdahl curve uses a different fraction reference/workload; SE bars are sampling precision, not model uncertainty.
